

What is a hot water storage tank?

Hot water storage tanks can be sized for nearly any application. As with chilled water storage, water can be heated and stored during periods of low thermal demand and then used during periods of high demand, ensuring that all thermal energy from the CHP system is efficiently utilized.

How much does a TES tank cost?

For chilled water TES, the storage tank is typically the single largest cost. The installed cost for chilled water tanks typically ranges from \$100 to \$200 per ton-hour,<sup>12</sup> which corresponds to \$0.97 to \$1.95 per gallon based on a 14°F temperature difference (unit costs can be lower for exceptionally large tanks).
