What are battery storage projects?

Battery storage projects developed by ISOs/RTOs are primarily short-term energy storage solutions. They are not designed to replace the traditional grid and typically use lithium-ion batteries, providing enough energy to support the local grid for approximately four hours or less.

What type of energy storage is available in the United States?

In 2017, the United States generated 4 billion megawatt-hours (MWh) of electricity, but only had 431 MWh of electricity storage available. Pumped-storage hydropower (PSH) is by far the most popular form of energy storage in the United States, where it accounts for 95 percent of utility-scale energy storage.

What is the total MW of battery storage in the US?

As of December 2017, there was approximately 708 MW of large-scale battery storage operational in the U.S. energy grid. Most of this storage is operated by organizations responsible for balancing the power grid, such as Independent System Operators (ISOs) and Regional Transmission Organizations (RTOs).
