How much energy is stored in a magnetic core?

Compare equations (36),(37),that the energy stored in the magnetic core is only 3.03% of the total energy, and the ratio of the energy stored in the magnetic core to the energy stored in the air gap is 1:32. It is verified that most energy is stored in the air gap during energy conversion of magnetic devices.

Does the storage energy distribution ratio of magnetic devices change after air gap?

The innovation point of this paper is to analyze storage energy distribution ratio on the core and gap of magnetic devices from the perspective of energy that the storage energy distribution ratio of magnetic devices is changed after the addition of air gap.

Superconducting Magnetic Energy Storage (SMES) is an energy storage technology that stores energy in the form of DC electricity that is a source of the DC magnetic field with near zero loss of energy. ac/dc power conv It stores energy by the flow of DC in a coil of superconducting material that has been cryogenically cooled.
