Are advanced insulation materials a promising insulation technology for storage tanks?

Therefore, advanced insulation materials are a promising insulation technology for the storage tanks. The Super Insulating Materials (SIMs), such as Vacuum Insulation Panels (VIPs) and Aerogel Based Products (ABPs), have a 5 - 10 times lower thermal conductivity compared to the traditional insulating materials. [7,8,9].

Why does sensible heat storage need a large volume?

However, sensible heat storage requires in general large volumes because of its low energy density, which is 3 and 5 times lower than that of PCM and TCS systems, respectively. Furthermore, sensible heat storage systems require proper design to discharge thermal energy at constant temperature.
