When will aluminium be used for energy storage?

Although it is possible that first systems for seasonal energy storage with aluminium may run as early as 2022, a large scale application is more likely from the year 2030 onward.

Can aluminium redox cycles be used for energy storage?

Aluminium redox cycles are promising candidates for seasonal energy storage. Energy that is stored chemically in Al may reach 23.5 MWh/m<sup>3</sup>. Power-to-Al can be used for storing solar or other renewable energy in aluminium. Hydrogen and heat can be produced at low temperatures from aluminium and water.

Can aluminum batteries be used as rechargeable energy storage?

Secondly, the potential of aluminum (Al) batteries as rechargeable energy storage is underscored by their notable volumetric capacity attributed to its high density (2.7 g cm<sup>-3</sup> at 25 °C) and its capacity to exchange three electrons, surpasses that of Li, Na, K, Mg, Ca, and Zn.

What are aluminum redox batteries?

Aluminum redox batteries represent a distinct category of energy storage systems relying on redox (reduction-oxidation) reactions to store and release electrical energy. Their distinguishing feature lies in the fact that these redox reactions take place directly within the electrolyte solution, encompassing the entire electrochemical cell.

Can aluminum be used as energy storage and carrier medium?

To this regard, this study focuses on the use of aluminum as energy storage and carrier medium, offering high volumetric energy density (23.5 kWh L<sup>-1</sup>), ease to transport and stock (e.g., as ingots), and is neither toxic nor dangerous when stored. In addition, mature production and recycling technologies exist for aluminum.
