Analysis and design of shore power storage development trend

What does a shore power researcher do?

Provide an in-depth evolution analysis in the practical development of shore power. Conduct a systematic bibliometric analysis of pivotal shore power-related publications. Coordinate practical shore power applications with academic research to highlight the predominant trends.

How do you analyze shore power research?

Conduct a systematic bibliometric analysis of pivotal shore power-related publications. Coordinate practical shore power applications with academic research to highlight the predominant trends. Divide shore power research into four categories to understand its progress and trends.

Is shore power a solution to shipping emissions reduction in ports?

This paper aims to conduct a state-of-the-art review of shore power by the Web of Science Core Collection and Scopus databases as a pivotal solution to shipping emissions reduction in ports and advancing the maritime sector towards carbon neutrality.

Does research on shore power have a framework?

Currently, existing research on shore power remains dispersed, yet it fully addresses such questions and lacks an integrated framework, making it challenging to extract pivotal insights.

Does shore power reduce ship emissions and noise in berthing?

Establish well-reasoned remarks, implications, and agenda for future studies. Shore power not only reduces ship emissions and noise in berthingbut also has shown practical implications for maritime competitiveness. However, the existing literature and industry reports reveal that a limited number of ships have access to shore power.

How can shore power improve maritime competitiveness?

Divide shore power research into four categories to understand its progress and trends. Establish well-reasoned remarks, implications, and agenda for future studies. Shore power not only reduces ship emissions and noise in berthing but also has shown practical implications for maritime competitiveness.

This paper optimizes shore power monitoring system, strengthens energy efficiency management, and promotes the normal use of shore power by analyzing the technical requirements of power ...

At the current time of writing, the installed capacity of FOWTs is 121 MW, however it is anticipated that this will increase to 18.9 GW by 2030 [1] and to 264 GW by 2050 [2]. Fig. ...

This paper presents state-of-the-art and future marine solutions, discusses shore to ship power technology while considering voltage, frequency, power and other technical ...

The valuable findings are revealed, including (i) The adoption of shore power by ports is predominantly propelled by regulatory mandates and incentives, inclusive of ...

As a kind of clean and green energy, offshore wind power offers great environmental protection value because it does not produce pollutants or CO 2 in the ...

The analysis of the process involves the demand for both electrical and thermal energy. As regards the former, the analysis covers a period of one year. For this period, it is ...

In this article, we used literature analysis software to analyze the relevant literature of our research object to fully understand its research status. Results show that the use of ...

The development of energy storage technology (EST) has become an important guarantee for solving the volatility of renewable energy (RE) generation and promoting the ...

Stringing together high-frequency keywords, it can be seen that energy management of ships is mainly about design selection, management, simulation and ...

As global energy crises and climate change intensify, offshore wind energy, as a renewable energy source, is given more attention globally. The wind power generation system is fundamental in harnessing offshore wind ...

Shore power (SP) and emission control area (ECA) have been two of the main polices for a green maritime logistics. However, it is still not clear how the joint impact of these two polices will ...

A hybrid solar/wind energy/fuel cell ship power system model is constructed for ships, and a hybrid solar/wind energy power supply and hydrogen production model is ...

The shore power technology of ships refers to stop using diesel generators during berthing, and the ships are powered by shore power, which plays the role of en

The objective of this comprehensive research work is to focus on state-of-the-art technology development in shipping and shore-ship power supply. This paper explains the ...

Abstract: In the context of energy saving and emission reduction and building green ports, ship-to-shore power technology is one of the important strategies favored by governments to solve ...
