Battery, battery energy storage system (BESS), energy storage systems, fuel cell, generation expansion planning, hybrid energy storage, microgrid, particle swarm optimization, power system planning, PV, ramp rate, renewable energy integration, renewable energy sources, sizing, solar photovoltaic, storage, techno-economic analysis, and wind turbine.

How to optimize ESS for renewables?

Bibliometric analysis unveils key themes in optimizing ESS for renewables. The rise in research in this field shows that the field is constantly evolving. Hybrid RES, battery energy storage systems, and meta-heuristic algorithms are the prominent themes. MATLAB emerged as the dominant software tool.

Can bibliometric analysis be used for thermal management of electric batteries?

Bibliometric analysis was used to evaluate trends in research pertaining to the thermal management of electric batteries, utilizing the WoS and SCOPUS databases. The article lacks in providing future directions based on the findings of the analysis.

How can energy storage systems address intermittency?

Technically, there are two approaches to address the inherent intermittency of RES: utilizing energy storage systems (ESS) to smooth the output power or employing control methods in lieu of ESS. The increased system complexity and cost associated with the latter approach render the former the most cost-effective option.

Are batteries a kind of energy storage?

Approximately 65 % of the publications considered batteries as a kind of energy storage. Among them, lithium ion (Li-ion) and lead-acid (Pb-Ac) batteries make up 17 % and 8 % of the manuscripts, respectively. Additionally, sodium-sulfur (NaS) and vanadium redox flow battery (VRF) represent a small share.

How many publications does applied energy & energies have?

With 25 publications each, Applied Energy and Energies ranked second in terms of contribution. Journal of Energy Storage, IEEE Access, Transactions on Sustainable Energy, International Journal of Electrical Power and Energy Systems, and Renewable Power Generation each contributed 23, 17, 12, 10, and 10 manuscripts, respectively.
