

Analysis of the reasons for the adjustment of energy storage electricity price policy

Do policy adjustments affect energy storage technology investments?

The findings of this study are as follows: 1) The frequency of policy adjustments and the magnitude of subsidy adjustments can both influence energy storage technology investments, but the magnitude of subsidy adjustments is more significant.

Can market designs affect the contribution of energy storage to electricity economics?

This study aims to evaluate how market designs can affect the contribution of energy storage to electricity economics and decarbonization, from early to deep decarbonization stages. The proposed open-source framework can be used by researchers and policymakers to assess emerging technologies and policy incentives.

Will energy storage change the development layout of new energy?

The deployment of energy storage will change the development layout of new energy. This paper expounds the policy requirements for the allocation of energy storage, and proposes two economic calculation models for energy storage allocation based on the levelized cost of electricity and the on-grid electricity price in the operating area.

How does price affect energy storage technology investment income?

The price has considerable uncertainty, which directly affects the energy storage technology investment income. Investment in energy storage technology is characterized by high uncertainty. Therefore, it is necessary to effectively and rationally analyze energy storage technology investments and prudently choose investment strategies.

What are the factors affecting energy storage technology investment?

In addition, there are also many uncertain factors in technological innovation and market related to energy storage technology investment. On the one hand, Technological innovations appear at random points in time and investors are unable to make decisions between adopting existing and new technologies.

Do deterministic and uncertain policies affect energy storage technology investment?

To compare deterministic and uncertain policies' incentive effect on energy storage technology investment, this study selects the average peak and off-peak power price difference for energy storage participation in peak regulation auxiliary services in some Chinese provinces as a reference standard in this study.

Generally speaking, the feed-in-tariff of a stable generator shall be lower than that of peak shaving units and energy storage equipment. The electricity price of high-voltage ...
