What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

Are grid-scale battery energy storage systems safe?

Despite widely known hazards and safety design,grid-scale battery energy storage systems are not considered as safeas other industries such as chemical,aviation,nuclear,and petroleum. There is a lack of established risk management schemes and models for these systems.

Can energy storage systems be scaled up?

The energy storage system can be scaled up by adding more flywheels. Flywheels are not generally attractive for large-scale grid support services that require many kWh or MWh of energy storage because of the cost,safety,and space requirements. The most prominent safety issue in flywheels is failure of the rotor while it is rotating.

What hazard detection systems should a battery energy storage system have?

Everyone's safety around the battery energy storage system is crucial. Therefore, implementing hazard detection systems -- such as voltage and current monitors, heat and smoke detectors, gas meters, an explosion study and fire suppression -- will be necessary features.

What happens if an energy storage system fails?

Any failure of an energy storage system poses the potential for significant financial loss. At the utility scale, ESSs are most often multi-megawatt-sized systems that consist of thousands or millions of individual Li-ion battery cells.

What are the safety concerns with thermal energy storage?

The main safety concerns with thermal energy storage are all heat-related. Good thermal insulation is needed to reduce heat losses as well as to prevent burns and other heat-related injuries. Molten salt storage requires consideration of the toxicity of the materials and difficulty of handling corrosive fluids.
