Why do we need battery energy storage systems?

How do batteries store electricity?

Batteries and similar devices accept, store, and release electricity on demand. They use chemistry, in the form of chemical potential, to store energy, just like many other everyday energy sources. For example, logs and oxygen both store energy in their chemical bonds until burning converts some of that chemical energy to heat.

Why do we need batteries?

Batteries play a crucial role in integrating renewable energy sourceslike solar and wind into the grid. By storing excess energy generated during periods of high production and releasing it during periods of low production, batteries help mitigate the intermittency of renewables and ensure a stable energy supply.
