Does power supply variation affect the optimal configuration of battery energy storage system? The effects of variations in power supply on the optimal configuration are studied. Aiming to minimize the total cost of hybrid power system (HPS), a mathematical model for the configuration of battery energy storage system (BESS) with multiple types of batteries was proposed.

How to optimize battery energy storage in grid-connected microgrid?

The optimal configuration of battery energy storage system is key to the designing of a microgrid. In this paper, a optimal configuration method of energy storage in grid-connected microgrid is proposed. Firstly, the two-layer decision model to allocate the capacity of storage is established.

What is battery energy storage system (BESS)?

Energy storage systems play an increasingly important role in modern power systems. Battery energy storage system (BESS) is widely applied in user-side such as buildings, residential communities, and industrial sites due to its scalability, quick response, and design flexibility, .

Why are battery energy storage systems important?

Battery energy storage systems (BESSs) have been widely employed on the user-side such as buildings, residential communities, and industrial sites due to their scalability, quick response, and design flexibility. However, cell degradation is caused by the charging and discharging of batteries, which reduces the economy of BESSs.

What is the optimal configuration method of energy storage in grid-connected microgrid?

In this paper, a optimal configuration method of energy storage in grid-connected microgrid is proposed. Firstly, the two-layer decision model to allocate the capacity of storage is established. The decision variables in outer programming model are the capacity and power of the storage system.

Can energy storage systems be used with different energy storage technologies?

Extensive efforts have been madeon the utilization of the energy storage system with the different energy storage technologies in the HPS [16,17]. Jiang et al. proposed a unified mathematical model to optimize the configuration of the BESS with multiple types of batteries, in which the fixed power supply and demand curves are adopted.
