

Can Bionic interfaces be used for energy harvesting?

It is also worth to note that other bio-inspired structures such as woodpecker-inspired and leaf-inspired designs are intriguing and innovative, which hold the potential to use AM and further transform the development of bionic interfaces for energy harvesting , .

What is a bionic structure interface?

Imitating from and going beyond biological architectures, bionic designed structure interfaces reconstruct some unique interfacial functions on the renewable energy applications such as wetting state manipulation, energy conservation, and chemistry reaction.

What are the different types of Bionic interfaces?

The several major categories of AM methods include heat-powered AM , light-curing AM , extrusion-based AM , and their post treatments. The renewable energy applications of bionic interfaces include drag reduction , water/oil harvesting , energy harvesting , batteries , catalyst and reactor , . 2.

What is bionic surface or interface electric-energy harvesting?

Bionic surface or interface electric-energy harvesting entails the design and fabrication of interface materials that demonstrate harmonious structure-function relationships inspired by biological surface or interface structures.

How can Bionic structures be fabricated?

However, traditional methods of fabricating bionic structures or interfaces, such as spraying , laser micro-fabrication and moulding , are limited in their ability to generate geometric complexity and have limited design flexibility, material availability, and post-treatment ability.

Can bioinspired materials transform energy storage devices?

Bioinspired materials hold great potential for transforming energy storage devices due to escalating demand for high-performance energy storage.

Porous carbons hold broad application prospects in the domains of electrochemical energy storage devices and sensors. In this study, porous carbon derived ...

The crystal lattice structure of energy-storage materials seriously deformed during the redox reactions that caused as ions insertion/extraction, leading to the mechanical fracture ...
