

Does closing a bedroom door save energy?

Scenario 1: If your home only has one return air grille, the answer to this question is a hard No. Closing the bedroom doors in your home does not cool the room better, save energy, or decrease your monthly electric bill. In fact, it increases your energy expense.

Is closing your doors a waste of energy?

According to Conditioned Air Solutions, closing the doors in unused rooms or bedrooms for prolonged times can cause your HVAC to overwork itself, leading to an energy bill spike. On top of that, closing doors can lead to air escaping into your attic or out of gaps near windows, which is also a waste of energy.

Does closing a bedroom door improve HVAC efficiency?

Contrary to popular belief, closing your bedroom doors does not improve the efficiency of your HVAC system and may actually increase your utility bills. When you close a bedroom door, you effectively block the air's pathway, and that blockage can lead to issues with airflow.

Does keeping a door closed increase energy expense?

In fact, it increases your energy expense. When you keep a door closed, the air becomes trapped inside that room, increasing the air pressure. This positive pressure forces the air to find a way out, i.e., through walls, windows, sliding doors, ceilings, etc.

Should you close your doors & vents to keep your electricity costs down?

There's a widely shared hack that claims to keep your electricity costs down: Close the doors and vents to seal off the spaces you aren't using to keep the cool air in one room. It sounds like common sense, right? Wrong. You may be shocked to find that closing doors are more likely to cause your electricity usage to move in the wrong direction.

What happens if you close a bedroom door?

When you close a bedroom door, you effectively block the air's pathway, and that blockage can lead to issues with airflow. Also, when a room is not properly vented, you could experience cold drafts in the winter, high humidity in the summer, and even mold! Some homeowners even go as far as closing the vents to the HVAC system in those rooms.
