

# Can china-europe energy storage be invested in

Should China invest in the European energy sector?

We highlight the significant opportunities for, as well as the political and economic risks of, Chinese investments in the European energy sector. On the one hand, the benefits can be substantial, as China's new role as a global investor offers substantial economic benefits and political partnership.

Where in Europe does China invest?

Europe is a major destination for Chinese firms, with investment flows worth \$9.8 billion in 2014. China has invested in all 28 Member States of the EU (MofCom, 2015), but most investments are concentrated in the UK, Germany and France. Energy was a key sector for investment.

Why are Chinese solar and wind investments falling in Europe?

Chinese investments in solar and wind in Europe, particularly in Germany, have seen significant increases followed by rapid falls since 2012-13. These falls appear to be linked to market difficulties. The motivation for investment is primarily market seeking, while technology seeking plays a key role in acquisitions.

How does Chinese FDI affect Europe's energy sector?

Private enterprises account for a growing share of Chinese FDI in Europe's energy sector. Increasing Chinese investment in southern and central Europe. Inflow helps to address underinvestment in European infrastructure. Subsidization of Chinese companies challenges the rules of fair competition.

Why are Chinese investments in the EU's energy sector rising?

Within the energy sector, investments have targeted fossil fuel assets and renewable energy projects, as well as electricity infrastructures and utility assets that were being privatized. The reasons behind rising Chinese investments in the EU's energy sector are varied.

Should Chinese companies invest in the EU?

Chinese firms prefer to invest in the EU renewable energy sector alone rather than with a local partner or through acquisition. This preference has persisted over time, indicating a strong motivation for Chinese companies to invest in the EU.

The crucial role of battery storage in Europe's energy grid (EurActiv, 11 Oct 2024) In 2023, more than 500 GW of renewable energy capacity was added to the world to combat ...
