What is a cascade hydropower plant & pump station?

The CESS is an integrated system of cascade hydropower plants and pump stations, whose main function is to consume excess energy from renewables, while satisfying water and energy demands for the public. Essentially, the CESS belongs to a kind of pumped storage power station.

What is the eficiency of a cascade hydropower system?

The efficiency is defined as a ratio of reduced renewable energy curtailment to increased hydropower pro-duction, and it is calculated based on two scenarios (i.e., optimal oper-ations of the cascade hydropower system and CESS). A case study using China's Longyangxia-Laxiwa CESS was conducted.

Can on-site energy storage units reduce wind energy curtailment?

Techno-economic analysis of on-site energy storage units to mitigate wind energy curtailment: a case study in scotland. Energies 2021;14:1691. Park S-W, Cho K-S, Hoefter G, Son S-Y. Electric vehicle charging management using location-based incentives for reducing renewable energy curtailment considering the distribution system.

How many Cascade hydropower plants are in a cess?

In view of these, a larger scale CESS consisting of threeor more cascade hydropower plants would be considered to further investigate its operation mechanism. Meanwhile, a long- and short-term nested operation model could be constructed to refine operating rules of the CESS. Long Cheng: Data curation, Conceptualization.

Which scenario is used to calculate energy production potential of Cascade hydropower plants? Scenario IIIwas used to calculate energy production potential of the cascade hydropower plants, and the pump station was assumed to shut down. In this scenario, operating rule curves and power output decision in each zone of the Longyanxia were optimized using MOCS, with objective functions as shown in Eqs. (14),(15) and (17).
