

The results indicated that self-consumption can be maximized by selecting the proper volume of the seasonal storage and the thermal capacity of the heat pump, in order to ...

Three SAT-based PCMs are prepared for heat pumps of cascade thermal storage. Performances of cascade thermal energy storage device are better than those of single stage. ...

This paper proposes an innovative system that integrates two thermoelectric heat pumps (one air-water and the other water-water) with two thermal storage tanks at different temperatures to provide heating and ...

The cascade heat pump is a combination of low temperature (LT) cycle and high temperature cycle (HT) having R134a and R245fa refrigerants, respectively, as working fluids. or the LT cycle, the heat pump generates cool water by extracting heat from the water in the cool storage (CS) at the heat pump LT evaporator and the LT cycle supplies heat ...

The need for innovative heating and cooling systems to decarbonize the building sector is widely recognized. It is especially important to increase the share of renewables at building level by maximizing self ...

Vapor-compression high-temperature heat pump (HTHP) is a key technology of low-temperature heat recovery, which is widely applied in industrial fields, such as chemical plants, milk factories and paper mills [3, 4] can improve low quality heat energy to high quality by consuming a small amount of electric energy or heat.

In recent decades, energy conservation and environmental protection are two of the main challenges that the whole world is facing. Energy consumption in the building sector accounts for approximately 39% of the total global energy consumption and 38% of the total global CO₂ emissions [1]. With respect to space conditioning and thermal comfort delivery in ...

Cascade Energy Services: Full-service Heating & Air Conditioner company providing residential service, installation, and repair in the greater Seattle area. Cascade Energy Services. ... Bill and his crew did a stellar job installing a ...

This paper proposes an integrated cascade energy system including liquid air energy storage, two-stage organic Rankine cycle, organic Rankine cycle, liquid natural gas regasification and absorption heat pump/chiller to use waste heat and liquid natural gas's cold energy fully and improve the round-trip efficiency.

Cascade high-temperature heat pumps (CHTHPs) are often applied to recover low-temperature industrial

waste heat owing to their large temperature lift. Through a comprehensive consideration of thermodynamic ...

Among these methods, a cascade heat pump system uses a pair of compressors, each working individually with its own refrigerant to obtain a higher condensing temperature and a reduced evaporating temperature. ... With the wide applications of thermal energy storage (TES) to HVAC systems, a TES based reverse cycle defrosting method has been ...

In addition, the PCM-HE can also be combined with cascade heat pump system used in cold area. ... Jiang Yiqiang, and Yao Yang. "Experimental study on the characteristics of thermal energy storage for air-source heat pump defrosting using sub-cooling energy of refrigeration." *Acta Solar Sinica*, 33 (9) (2012): 1536-1540. (in Chinese ...

However, the most efficient and energy-saving solution is an inverter heat pump cascade, as adjusting the compressor speeds enables even more precise and faster modulation. ... cisterns or ice energy storage tanks, a cascade with two ...

As demand for more efficient heating systems grows, the better comfort is desired in buildings. The ground source heat pump systems (GSHP) using shallow geothermal energy become a viable choice among alternative heating systems because of higher coefficient of performance and lower carbon emissions, compared to conventional heating systems ...

Heat pumps and thermal energy storage technologies are presented. Simulation and experimental researches on heating and cooling of buildings. Focus on air and ground ...

Heat storage methods for solar-driven cross-seasonal heating include tank thermal energy storage (TTES), pit thermal energy storage (PTES), borehole thermal energy storage (BTES), and aquifer ...

with an optimized transcritical heat pump cycle, this high temperature industrial heat pump system is able to generate temperatures from 0°C (32°F) up to 150°C (302°F) and up to 50 MW (170.61 MMBtu/h) of thermal heat and 30 MW (8530 tons of refrigeration) of thermal cold with using just one single heat pump unit. Energy & storage systems

The solar heat pump system coupled with the thermal energy storage (TES) device is often considered as an important solution for thermal management. Exergy optimization theory is used to obtain the phase change temperatures of the cascade latent ...

Liquid air energy storage can enhance the absorptive capacity for renewable energy due to its high energy storage density and extensive application scenarios. This paper proposes an integrated cascade energy system including liquid air energy storage, two-stage organic Rankine cycle, organic Rankine cycle, liquid natural gas regasification and absorption heat ...

Utilizing phase change materials with high energy density and stable heat output effectively improves energy storage efficiency. This study integrates cascaded phase change ...

The system combined a hybrid sorption-compression heat pump in cascade configuration, a three-fluids heat exchanger with a PCM embedded in the compression unit of the cascade heat pump, and a DC-bus that included PV ...

In recent decades, energy conservation and environmental protection are two of the main challenges that the whole world is facing. Energy consumption in the building sector accounts for approximately 39% of the total global energy consumption and 38% of the total global CO₂ emissions [1]. With respect to space conditioning and thermal comfort delivery in ...

Results showed that the energy efficiency of the heat pump in cascade operation was double compared to compression-only configuration and that, when simultaneously charging and discharging...

Integrating heat pumps with high-efficiency latent heat thermal energy storage systems with phase change materials (PCMs) can increase the heat temperature and heat ...

Experimental study for a high efficiency cascade heat pump water heater system using a new near-zeotropic refrigerant mixture. Appl. Therm. Eng., 138 (2018), ... Improving defrosting performance of cascade air source heat pump using thermal energy storage based reverse cycle defrosting method. Appl. Therm. Eng., 121 (2017), pp. 728-736.

In this study, the design parameters, charging and discharging time of the system, outlet temperature and the thermal storage capacity for Heat Transfer Fluid (HTF) Therminol ...

Solutions applied to improve the energy and environmental efficiency of residential and commercial heating and cooling (H& C) systems include various combinations of heat ...

Cascade energy optimization for waste heat recovery in distributed energy systems. Author links open overlay panel Xuan Wang a b, Ming Jin b c, Wei Feng b, ... + P m, d, h PRI + P m, d, h EST _ from Heat loads can be satisfied by the natural gas boiler, electrical boiler, solar thermal, heat pump, WHRTs of 1AHP and DH, and heat storage. (3) ...

Keywords: Defrosting; Air source heat pump; Cascade; Thermal energy storage 1. Introduction Air Source Heat Pumps (ASHPs) have found applications worldwide in recent decades due to its advantages of energy-saving and environment-friendliness. However, the operation of an ASHP unit can be quite problematic when it is operated in extreme cold ...

The water-heating system consists of the cascade heat pump water heater, which uses R134a and R410A as refrigerants, and a water storage tank. The steady-state cascade heat pump model is developed based on

experimental results and the dynamic storage tank model is created by thermodynamic equations.

The cascade heat pump coupled with thermal energy storage operating in different scenarios is further studied. Laboratory and field trial results were obtained to develop and validate a cascade heat pump model integrated with a dynamic building simulation model. ... thermal energy storage (TES) coupled with heat pumps has significant merits for ...

Thermal energy storage (TES) technology has been used extensively for storing heat implemented in heat pump systems, such as space heating [8], [9] and cooling [10], or domestic hot water production [11]. To provide sufficient heat for reverse cycle defrost thus enable a quick defrost process, a TES based reverse cycle defrosting method has been developed for ...
