can cause eye and upper respiratory tract irritation. o Electrical hazards: Soldering units with frayed or damaged electrical wiring cause mayelectrical shock injury, or cause fire. Types of soldering o Soft Soldering: this method is used to create electrical connections and bond electronic components onto circuit boards.

The basic spot welding setup consists of a power supply, an energy storage unit (e.g., a capacitor bank), a switch, a welding transformer, and the welding electrodes. The capaci - tor bank acts as a supplier of high instantaneous power levels. The accumulated energy is dumped into the welding transformer when the switch is pressed.

Using the example of two battery cells connected in parallel, Fig. 1 illustrates the influence of the quality of cell connections on a battery assembly. The higher electrical contact resistance $R_{C,1}$ generates more heat at the terminal of cell 1. Additionally, the total current I_{ges} is divided unequally. These uneven loads may lead to inhomogeneous cell degradations.
