How many working modes does the G4 energy storage inverter have?

The G4 energy storage inverter has 7 working modes and two sets of flexible time axes. Except for EPS, the inverter automatically enters according to the working conditions, and other modes need to be manually selected by the customer. Working mode: Self Use, Feed-in priority, Backup mode, EPS, Manual, Generator mode, peak shaving.

What is the difference between rated power capacity and storage duration?

Rated power capacity is the total possible instantaneous discharge capability of a battery energy storage system (BESS), or the maximum rate of discharge it can achieve starting from a fully charged state. Storage duration, on the other hand, is the amount of time the BESS can discharge at its power capacity before depleting its energy capacity.

Who uses battery storage?

Battery storage is a technology that enables power system operators and utilities to store energy for later use.

As overall demand for energy increases in our modern world - so does the use of renewable sources like wind and solar. As the use of these variable sources of energy grows - so does the use of energy storage systems. Energy storage is a key component in balancing out supply and demand fluctuations.
