What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

Do energy storage systems need a CSR?

Until existing model codes and standards are updated or new ones developed and then adopted, one seeking to deploy energy storage technologies or needing to verify an installation's safety may be challenged in applying current CSRs to an energy storage system (ESS).

What if energy storage system and component standards are not identified?

Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development by an SDOor by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved by an SDO.

What is electrochemical energy storage?

Electrochemical energy storage includes various types of batteries that convert chemical energy into electrical energy by reversible oxidation-reduction reactions. Batteries are currently the most common form of new energy storage deployed because they are modular and scalable across diverse applications and geographic locations.

What is a safety standard for stationary batteries?

Safety standard for stationary batteries for energy storage applications,non-chemistry specificand includes electrochemical capacitor systems or hybrid electrochemical capacitor and battery systems. Includes requirements for unique technologies such as flow batteries and sodium beta (i.e.,sodium sulfur and sodium nickel chloride).

What are electrochemical energy storage deployments?

Summary of electrochemical energy storage deployments. Li-ion batteries are the dominant electrochemical grid energy storage technology. Characteristics such as high energy density, high power, high efficiency, and low self-discharge have made them attractive for many grid applications.

SPECIFIC LEGAL REQUIREMENTS 1) The Occupational Safety & Health (Use and Standard of Exposure of Chemical Hazardous to Health) Regulation 2000 (USECHH Regulation) stipulates the duty of employers to manage chemicals hazardous to health USE at workplaces. USE: production, processing, handling, storage, transport, disposal and treatment.
