Are aqueous Rechargeable Zn batteries sustainable?

Aqueous rechargeable Zn batteries incorporating MnO 2 cathodes possess favourable sustainability properties and are being considered for low-cost, high-safety energy storage. However, unstable electrode structures and unclear charge storage mechanisms limit their development.

Are carbon-based nanomaterials the future of energy conversion & storage?

With the availability of high specific surface area (SSA),well-balanced pore distribution,high conductivity,and tunable wettability,carbon-based nanomaterials are highly expected as advanced materials for energy conversion and storage to meet the increasing demands for clean and renewable energies.
