

What is a hybrid energy storage system?

1.2.3.5. Hybrid energy storage system (HESS) The energy storage system (ESS) is essential for EVs. EVs need a lot of various features to drive a vehicle such as high energy density, power density, good life cycle, and many others but these features can't be fulfilled by an individual energy storage system.

Why is ESS required to become a hybrid energy storage system?

So, ESS is required to become a hybrid energy storage system (HESS) and it helps to optimize the balanced energy storage system after combining the complementary characteristics of two or more ESS. Hence, HESS has been developed and helps to combine the output power of two or more energy storage systems (Demir-Cakan et al., 2013).

How EV hybrid technology can support the growth of EVs?

These technologies are based on different combinations of energy storage systems such as batteries, ultracapacitors and fuel cells. The hybrid combination may be the perspective technologies to support the growth of EVs in modern transportation.
