The third factor is electrification, i.e., the move from energy to electricity consumption. There is a revolutionary change in the paradigm, due to the further electrification of energy consumption. Indeed in 2018, power still attracted the most investment, exceeding oil and gas for a third year in a row (IEA, 2019) ch electrification mostly will occur at distribution level.

On the other hand, nonlinear controllers, such as sliding mode control (SMC) [11] and model predictive control (MPC) [12], have also found applications in frequency regulation of power systems. However, SMC suffers from the chattering phenomenon occurring along the sliding surface, and MPC, while guaranteeing optimality, incurs high computational costs ...

setpoint) occur if the plant does not include energy storage systems [6,7].
