Are vanadium redox flow batteries better than lithium-ion batteries?

In conclusion, the rivalry between vanadium redox flow batteries and lithium-ion batteries is pivotal in the energy storage conversation. Each has unique benefits. While lithium batteries have been the standard, vanadium redox and other flow batteries are gaining attention for their distinct advantages, particularly in large-scale storage.

Can vanadium batteries replace lithium batteries?

China is rich in vanadium resources, and it is feasible to use vanadium batteries to replace lithium batteries in some areas, but the energy density of vanadium battery is not as good as lithium battery, and it occupies a large area, which makes it only suitable for large-scale energy storage projects.

What is the energy density of vanadium redox flow battery?

At present, the energy density of vanadium redox flow battery is less than 50Wh/kg, which has a large gap with the energy density of 160Wh/kg lithium iron phosphate, coupled with the flow system, so the volume of vanadium flow batteries is much larger than other batteries, often stored in containers or even buildings, and cannot be easily moved.

What is the efficiency of vanadium flow battery?

Generally, the efficiency of vanadium flow batteries is about 70%. In terms of energy density, since the flow battery is limited by the composition of the electrolyte, the energy density is relatively low.

What is the difference between iron-chromium flow battery and vanadium flow battery?

The comparison between the Iron-chromium flow battery and the vanadium flow battery mainly depends on the power of the single cell stack. At present, the all-vanadium has achieved 200-400 kilowatts, while the Iron-chromium flow battery is less than 100 kilowatts, and the technical maturity is quite poor.

How long does a lithium battery last?

From the perspective of the whole life cycle, the life of lithium batteries in the actual operation of energy storage projects may be less than eight years, but the life of vanadium redox flow battery can reach 20 years or more.
