Addition of air storage to wind power generation increases impacts moderately. Main impact due to natural gas combustion (CAES) or thermal energy storage (ACAES).

What is compressed air energy storage?

Compressed air energy storage (CAES) is one of the many energy storage options that can store electric energy in the form of potential energy (compressed air) and can be deployed near central power plants or distribution centers. In response to demand, the stored energy can be discharged by expanding the stored air with a turboexpander generator.
