What is a ti-00602 electric toothbrush?

This TI Design uses Texas Instruments' low-voltage H-Bridge motor driver with an integrated LDO voltage regulator and an ultra-low-power microcontroller (MCU) to demonstrate a full implementation of a battery powered electric toothbrush. The TIDA-00602 functions as a control circuit and amplifier to an electric toothbrush motor.

What are the components of a smart toothbrush?

According to the patent, the smart toothbrush includes electronic (e.g., bipolar junction transistor (BTJ)-based) sensors and/or optical sensors as components. The present smart toothbrush platform is described in detail below.

What is a simplified electric toothbrush block diagram?

For the purpose of this report, a simplified electric toothbrush block diagram shows the logic and translation use cases. Simplified Block Diagram for Personal Care Electronics shows an example of this block diagram. Each red block has an associated use-case document. Table 1 and Table 2 provide links to the associated use-case document.

What is a smart Force-sensitive toothbrush?

Smart force-sensitive toothbrush is a mechatronics system designed to indicate best and worst situations for brushing teeth in terms of applied forces. Excessive force for brushing teeth can cause potential damage to teeth, gums, and enamels. Thus, maintaining steady and constant force while brushing is obvious.

Can a smart toothbrush detect induced pressure on bristle?

Excessive force for brushing teeth can cause potential damage to teeth, gums, and enamels. Thus, maintaining steady and constant force while brushing is obvious. In this manuscript a prototype of a smart toothbrush is presented which can detect induced pressure on bristle and alert user through LEDs.

Does a smart toothbrush 400 have a readout display?

The smart toothbrush 400's handle portion can include a readout display 406. As provided above, feedback can be given to the user through this display.
