

Can a waste-to-energy facility be used in Brunei?

Brunei's government is planning to utilise a waste-to-energy facility. This facility is expected to have an installed capacity of up to 10 MW. Whether other alternative energy sources such as wind power, hydro power, and ocean are economically and technically feasible in the medium term and the long term is still being researched.

How can Brunei support future energy security?

To support future energy security, Brunei should continue to strengthen upstream in order to meet the country's production target. Brunei should continue to support research, development, and demonstration activities as well as promote technology transfer on EEC and renewable energy.

What percentage of Brunei's GDP is generated by the energy sector?

About 60 percent of Brunei's GDP is generated by the energy sector, reflecting the huge contribution of this sector to the country's economy. The energy sector also dominates the country's export values, with crude oil, liquefied natural gas (LNG), and methanol exports accounting for over 90 percent of its total exports.

Will energy storage be stable in the future?

This may mean that electrochemical energy storage will enter a relatively stable period in the future, while thermal energy storage and electromagnetic energy storage will enter a period of rapid development.

Are Japan's research efforts in thermal energy storage a late start?

It was only in the period from 2019 to 2021 that Japan's research efforts in thermal energy storage slightly increased, indicating a relatively late start in the research of thermal energy storage, and research efforts from various economies are gradually entering this field.

Why is Japan focusing on energy storage?

Japan has long supported and paid attention to new energy and energy storage technologies, especially after the Fukushima nuclear accident in 2011. Japan has increased its research and development efforts on hydrogen energy and shifted more attention to electrochemical energy storage, aiming to reduce battery costs and improve battery life.
