Which polymer can be used as energy storage dielectrics for film capacitors?

This article proposes the all-organic sandwich-structured films with ferroelectric polymer poly (vinylidene fluoride-hexafluoropropylene) and linear polymer poly (ethylene terephthalate) (PET) as the energy storage dielectrics for film capacitors.

What is energy storage performance of polymer dielectric capacitor?

Energy storage testing The energy storage performance of polymer dielectric capacitor mainly refers to the electric energy that can be charged/discharged under applied or removed electric field. There are currently two mainstream methods for testing capacitor performance.

Can lead-free dielectric film capacitors be used for high-energy storage?

Lead-free dielectric film capacitors are widely used in electronic devices and power systems.
