

# Discussion on new energy storage business model and trading mechanism

What are the emerging energy storage business models?

The independent energy storage model under the spot power market and the shared energy storage model are emerging energy storage business models. They emphasized the independent status of energy storage. The energy storage has truly been upgraded from an auxiliary industry to the main industry.

Can energy storage be a new composite business model?

Due to its flexibility, energy storage should be widely used in competitive models. The spot market is used as the carrier, and the energy storage in each application scenario is uniformly deployed through the shared energy storage business model. It can serve as a new composite business model for energy storage.

What is shared energy storage & other energy storage business models?

Through shared energy storage and other energy storage business models, the application scope of energy storage on the power generation side, transmission and distribution side, and user side will be blurred. And many application scenarios can realize the composite utilization of energy storage according to demand.

Are energy storage business models convincing?

Neither clear nor convincing business models have been developed. The lessons from twelve case studies on energy storage business models give a glimpse of the future and show what players can do today.

What is the business model of energy storage in Germany?

The business model in the United States is developing rapidly in a mature electricity market environment. In Germany, the development of distributed energy storage is very rapid. About 52,000 residential energy storage systems in Germany serve photovoltaic power generation installations. The scale of energy storage capacity exceeds 300MWh.

What business models are used in energy storage technology?

According to this review, the two-part tariff model, the negotiated lease model and the energy performance contracting model are traditional business models that have been practiced for a long time. The application of these business models to energy storage technology has achieved good results.
