What percentage of the world's electricity is produced by coal?

The world's current total energy demand relies heavily on fossil fuels (80-85%), and among them, 39% of the total world's electricity is fulfilled by coal. The primary issue with coal is that coal-based power plants are the source of almost 30% of the total world's CO₂ emissions.

Are coal mines a renewable resource?

Renewable resources Renewable resource value streams are being deployed on some coal mines. Some mining locations are especially attractive for wind and solar platforms. Other sites, such as underground mines, may have valuable geological formations conducive to geothermal energy production.

Can energy storage systems be integrated with fossil power plants?

Several studies have been reported in the literature, particularly on power plant system modeling, and integration of sensible and latent heat-based energy storage systems with fossil power cycles. Liquid air energy storage (LAES) is another form of energy storage that has been proposed for integration with fossil power plants.

What are the environmental impacts of a shift from coal to renewables?

Environmental impacts are at the heart of the shift from coal to renewables. Burning coal releases significant amounts of greenhouse gases, contributing to global warming. In contrast, wind and solar energy produce electricity with minimal carbon emissions during operation.

How has coal consumption changed over the years?

In the Philippines and Viet Nam, coal power generation was the main driver. In advanced economies, coal demand has halved from the peak seen in 2007 and 2024 saw another decline. In the United States, coal consumption fell by 4% (around 10 Mtce), though this is a significant slowdown compared with the 17% drop recorded in 2023.

The primary energy production in China increased steadily from 637 Mtce in 1980 to 1326 Mtce in 1996, dropped to 1243 Mtce by 1998, and then began to rebound and hit 2354 Mtce by 2007 (China Statistics Bureau, 2008), as displayed in Fig. 1. Although common complaints about coal include its inconvenience, low efficiency and high pollution, coal is still dominant in ...
