Why is a fire hazard study important?

It offers new data on how these fires ignite, propagate, and can lead to explosion hazards that pose safety issues to first responders and occupants. It was the first study to evaluate these hazards and develop tactical considerations for the fire service.

How can I improve fire safety with ESS?

In addition, you can join a SEAC working group, including the Storage Fire Detection working group and the ESS Standards working group, that's working to improve fire safety with ESS. Lastly, join SEAC for a virtual workshop on safety and risk considerations when permitting ESS.

Do lithium batteries need fire protection?

FSRI conducted three tests to simulate combustion and protection systems for lithium battery fires. One test took place without any provision for fire protection. A second test used the Novec 1230 fire protection fluid, a product sold by the chemical company 3M but not recommended by 3M for this scale of an installation.
