

Dual control of energy consumption is beneficial to energy storage

Are "double control" goals efficient?

This paper introduces the background of goals regarding "double control" of total energy consumption and energy intensity, sorts out policies regarding "double control" action and their implementation, and points out that the standards for "double control" are efficient for the realization of "double control" goals.

What is a two-layer optimization control for thermal power and energy storage?

A two-layer optimization control for thermal power and energy storage is developed, taking into account the remaining frequency regulation capacity of the coordinated operation between them based on AGC instructions. This model considers the cost of frequency regulation loss and SOC deviations.

How to improve the frequency regulation capacity of thermal power units?

In order to enhance the frequency regulation capacity of thermal power units and reduce the associated costs, multi-constrained optimal control of energy storage combined thermal power participating in frequency regulation based on life loss model of energy storage has been proposed. The conclusions are as follows:

Can energy storage support the frequency regulation of thermal power units?

Comprehensive evaluation index performance table. Therefore, in the current rapidly developing new energy landscape where conventional frequency regulation resources are insufficient, the proposed strategy allows for more economical and efficient utilization of energy storage to support the frequency regulation of thermal power units.

Why should energy storage equipment be used in a multi-energy micro-grid system?

The introduction of energy storage equipment in the multi-energy micro-grid system is beneficial to the matching between the renewable energy output and the electrical and thermal load, and improve the system controllability,...

Can a thermochemically efficient energy storage system be used in industrial systems?

Lass-Seyoum et al. reported an analysis of the creation of a thermochemically efficient and effective energy storage system (ESS) for use in heating systems and large-scale industrial systems or processes.

Abstract: The transformation from energy consumption "dual control" to carbon "dual control" system will bring about the surge in demand for renewable energy, and increase the level of new energy development and terminal electrification, which, at present, may increase the pressure of new energy consumption and power supply. ...

To fully utilize energy storage to assist thermal power in improving scheduling accuracy and tracking frequency variations, as well as achieving coordinated control of the frequency regulation power in the ESCTPFR system, this paper proposes a multi-constraint ...

Dual control of energy consumption is beneficial to energy storage

The energy industry is a key industry in China. The development of clean energy technologies, which prioritize the transformation of traditional power into clean power, is crucial to minimize peak carbon emissions and achieve carbon neutralization (Zhou et al., 2018, Bie et al., 2020) recent years, the installed capacity of renewable energy resources has been steadily ...

This paper introduces the background of goals regarding "double control" of total energy consumption and energy intensity, sorts out policies regarding "double control" action and their...

Between 2007 and 2030, the worldwide transport energy consumption is expected to grow 1.6 % on average year, according to the International Energy Agency ... The study proposed a model predictive control-based dual-battery energy storage system (DBESS) power dispatching technique for a wind farm (MPC). To explore the DBESS working condition, a ...

Electrical Energy Storage, EES, is one of the key ... 1.2.3 Long distance between generation and consumption 10 1.2.4 Congestion in power grids 11 1.2.5 Transmission by cable 11 1.3 Emerging needs for EES 11 ... 3.3 Management and control hierarchy of ...

80%,??(""),? ...

In 2023, China further proposed creating conditions to shift from dual control of total energy consumption and intensity to dual control of total CO₂ emissions (CE) and CO₂ emissions intensity (CEI) as soon as possible (The State Council, 2023) will be an important step for China to achieve the goal of precise control of CO₂ emissions. Similar with the actual ...

China will establish a new mechanism to control carbon emissions and emission intensity from its grip on energy consumption and consumption intensity for the country's carbon neutrality and green development, said a circular released by the General Office of the State Council on Aug 2. ... (2026-2030) period, a dual control system for carbon ...

In modern times, energy storage has become recognized as an essential part of the current energy supply chain. The primary rationales for this include the simple fact that it has the potential to improve grid stability, improve the adoption of renewable energy resources, enhance energy system productivity, reducing the use of fossil fuels, and decrease the ...

Capital providers have placed increasing importance on risks associated with transitioning to a low-carbon economy. This study investigates the causal link between energy regulation and cost of debt financing by exploiting regional variations in stringency of the dual control system of total energy consumption and energy intensity (dual controls) to construct a ...

Dual control of energy consumption is beneficial to energy storage

Due to the intermittency of renewable energy, integrating large quantities of renewable energy to the grid may lead to wind and light abandonment and negatively impact the supply-demand side [9], [10]. One feasible solution is to exploit energy storage facilities for improving system flexibility and reliability [11]. Energy storage facilities are well-known for their ...

Due to various advantages, dynamic programming based algorithms are used extensively for solving energy storage optimization problems. Several studies use dynamic ...

In recent years, many scholars have studied energy storage in the user-side microgrid. Golpira et al. [8] divided the design of distribution networks in Smart Cities into two layers and used shiftable loads and the energy storages to meet the energy balance with the minimum cost. Dvorkin et al. [5] proposed a bilevel program (BLP) to determine the optimal ES ...

Through the storage of excess energy and subsequent usage when needed, energy storage technologies can assist in maintaining a balance between generation and ...

Tang Lang, Wang Peng, Ren Songyan. From dual control of energy consumption to dual control of carbon : a comparative study of policies from multiple perspectives[J]. Science Technology and Engineering, 2024, 24(25): 11019-11029.

Table 3 illustrates the dynamic optimal control strategy, in which the optimal control parameters of f , n , V_w , h and V_w , c were determined by GA based on the outlet water temperatures of hot and cold storage tanks. The dynamic optimal control strategy for energy charging of the dual-mode coupled system can be presented as the following ...

Currently, the energy storage device is considered one of the most effective tools in household energy management problems [2] and it has significant potential economic benefits [3, 4]. Energy storage devices can enable households to realize energy conservation by releasing stored energy at appropriate times without disrupting normal device usage, and decrease peak ...

In line with the 14th Five-Year Plan, the country targeted a 13.5% reduction in unit GDP energy consumption and an 18% decrease in CO₂ emissions. As part of its commitment to climate action by 2030, China introduced the "Carbon Peak Action Plan by 2030" emphasizing the control of fossil energy use and transitioning to carbon intensity control (Agency, 2021; Xi, 2022).

There are three primary steps: calculating the equivalent specific fuel consumption (esfc) for the benchmark (no energy storage) case, taking into account transmission losses (Equation (1)), calculating the equivalent specific fuel consumption for the additional power generated, which will be used to charge the energy storage (Equation (2) ...

Dual control of energy consumption is beneficial to energy storage

Due to the inherent slow response time of diesel generators within an islanded microgrid (MG), their frequency and voltage control systems often struggle to effectively ...

The 13th Five-Year Plan (2016-20) adopted a dual control policy for the total amount and energy consumption intensity, capping the total energy consumption at 5 billion tons of standard coal equivalent annually. And energy ...

Abstract: With profound changes in China's energy development situation and the adjustment of the "dual-control" policy of energy consumption amount and intensity, it is worthwhile to re ...

Power systems are undergoing a significant transformation around the globe. Renewable energy sources (RES) are replacing their conventional counterparts, leading to a variable, unpredictable, and distributed energy supply mix. The predominant forms of RES, wind, and solar photovoltaic (PV) require inverter-based resources (IBRs) that lack inherent ...

As renewable energy penetration increases, maintaining grid frequency stability becomes more challenging due to reduced system inertia. This paper proposes an analytical ...

The 13th Five-Year Plan (2016-20) adopted a dual control policy for the total amount and energy consumption intensity, capping the total energy consumption at 5 billion tons of standard coal ...

In this case, a packed-bed storage unit with smaller thickness and larger surface area will markedly contribute to a low energy consumption of operation and high-power density. From the perspective of thermal energy utilization, one of the most significant issues to be addressed is thermal energy upgrading [17].

At present, there are many feasibility studies on energy storage participating in frequency regulation. Literature [8] proposed a cross-regional optimal scheduling of Thermal power-energy storage in a dynamic economic environment. Literature [9] verified the response of energy storage to frequency regulation under different conditions literature [10, 11] analyzed ...

The composition of worldwide energy consumption is undergoing tremendous changes due to the consumption of non-renewable fossil energy and emerging global warming issues. Renewable energy is now the focus of energy development to replace traditional fossil energy. Energy storage system (ESS) is playing a vital role in power system operations ...

4. Accelerate the construction of low-carbon energy storage system. 5. Promote the dual control of carbon emission in the field of architecture. This article proposes the following suggestions for improving the effectiveness of the shift from dual control of energy consumption to dual control of carbon emission. 1. Enhance the awareness. 2.

Dual control of energy consumption is beneficial to energy storage

Aiming at the optimal economic cost and carbon emissions of the multi-energy microgrid, this paper comprehensively considers the electrical/thermal/gas coupling demand ...

Multi-objective optimization of building life cycle energy consumption and cost is very essential for guiding design quantitatively. However, previous studies paid more attention to the potential effect of building energy saving and cost reduction based on design parameters from the perspective of designers, but ignored the potential brought by the willingness of users ...
