

Can a new external-compression air separation unit help a power grid?

A new external-compression air separation unit with energy storage is proposed. Air is recovered as the Lachman air after power generation. The proposed system can help for peak regulation in power grid. Long-term supply demand balance in a power grid may be maintained by electric energy storage.

Can liquid air energy storage reduce power consumption of air separation unit?

Moreover, there remains a surplus of production capacity in air separation. This paper proposes an external-compression air separation process, with liquid air energy storage function. It can effectively reduce the power consumption cost of air separation unit while realizing peak load shifting.

How can energy storage systems meet the demands of large-scale energy storage?

To meet the demands for large-scale, long-duration, high-efficiency, and rapid-response energy storage systems, this study integrates physical and chemical energy storage technologies to develop a coupled energy storage system incorporating PEMEC, SOFC and CB.

What is electrical energy storage (EES)?

Electrical Energy Storage, EES, is one of the key technologies in the areas covered by the IEC. EES techniques have shown unique capabilities in coping with some critical characteristics of electricity, for example hourly variations in demand and price.

Is liquid air energy storage a new type of external-compression air separation unit?

Conclusion Through the discussion above, a new type of external-compression air separation unit with liquid air energy storage is proposed and studied. Under the condition of ensuring the normal operation of the ASU, the spare capacity of the system is fully utilised to store liquid air during the valley period.
