Our C&I energy storage solutions implement peak-valley time shifting and utilize power during off-peak times to reduce electricity costs and balance peak load. Discover how our commercial energy storage systems can help manage energy demand and improve operational reliability.

Why should you choose a commercial battery storage system?

Besides, our commercial battery storage systems facilitate load shifting, which can delay the need to expand and renovate power distribution facilities, enhancing overall power supply reliability. C&I users can achieve cost arbitrage by leveraging the price difference between peak and off-peak hours, reducing electricity costs.

How do you calculate power versus energy cost?

Total System Cost (\$/kW) = (Battery Pack Cost (\$/kWh) \times Storage Duration (hr) + Battery Power Capacity (kW) \times BOS Cost (\$/kW) + Battery Power Constant (\$)) / Battery Power Capacity (kW) For more information on the power versus energy cost breakdown, see (Cole and Frazier, 2020).

What is the capacity factor of a battery system?

The cost and performance of the battery systems are based on an assumption of approximately one cycle per day. Therefore, a 4-hour device has an expected capacity factor of 16.7% ($4/24 = 0.167$), and a 2-hour device has an expected capacity factor of 8.3% ($2/24 = 0.083$).
