Can electrified vehicles be used as energy storage systems?

Increasing electrified vehicle penetration would not only help reduce pollutant emissions and dependency on fossil fuels, but also facilitate the synergistic development of renewable energy through vehicle-to-grid (V2G) integration where PHEVs and BEVs can be used as flexible electrical storage systems[19,20].

Which energy storage sources are used in electric vehicles?

Electric vehicles (EVs) require high-performance ESSs that are reliable with high specific energy to provide long driving range . The main energy storage sources that are implemented in EVs include electrochemical, chemical, electrical, mechanical, and hybrid ESSs, either singly or in conjunction with one another.

Which energy storage systems are suitable for electric mobility?

A number of scholarly articles of superior quality have been published recently, addressing various energy storage systems for electric mobility including lithium-ion battery, FC, flywheel, lithium-sulfur battery, compressed air storage, hybridization of battery with SCs and FC ,,,,,,.

What is electrochemical energy storage?

Electrochemical energy storage i.e., batteries for EVsare described, including pre-lithium, lithium-ion and post lithium. To promote electric transportation, a resemblance of distinct battery properties is made in relation to specific energy, charging rate, life span, driving range, and cell voltage.

What is a hybrid electrochemical energy storage system?

Hybrid electrochemical energy storage systems (HEESSs) composed of lithium-ion batteries and supercapacitorscan play a significant role on the frontier. However, the development of an efficient HEESS for specified applications involves with multi-faceted aspects.

How can auxiliary energy storage systems promote sustainable electric mobility?

Auxiliary energy storage systems including FCs, ultracapacitors, flywheels, superconducting magnet, and hybrid energy storage together with their benefits, functional properties, and potential uses, are analysed and detailed in order to promote sustainable electric mobility.
