

What are energy storage business models?

Energy storage business models that deliver multiple, stacked services can provide system-wide benefits. With appropriate valuation of those services, such battery business models can also provide net economic benefit to the battery owner/operator.

Does battery-based energy storage provide value to the electricity grid?

UTILITIES, REGULATORS, and private industry have begun exploring how battery-based energy storage can provide value to the U.S. electricity grid at scale. However, exactly where energy storage is deployed on the electricity system can have an immense impact on the value created by the technology. With this report, we explore four key questions: 1.

Where are battery-based energy storage systems located?

The further downstream battery-based energy storage systems are located on the electricity system, the more services they can offer to the system at large. Energy storage can be sited at three different levels: behind the meter, at the distribution level, or at the transmission level.

Who are the authors of battery energy storage?

All authors from Rocky Mountain Institute unless otherwise noted. Fitzgerald, Garrett, James Mandel, Jesse Morris, and Hervé Touati. The Economics of Battery Energy Storage: How multi-use, customer-sited batteries deliver the most services and value to customers and the grid.

What is energy storage?

New entrants designing energy services solutions around storage and digital offerings are knocking on the door. For these players energy storage is a mode to enter the market. Some players may only offer storage capacity and will act as independent storage operators, as opposed to the independent power producers we know today.

Is energy storage a profitable business model?

Although academic analysis finds that business models for energy storage are largely unprofitable, annual deployment of storage capacity is globally on the rise (IEA, 2020). One reason may be generous subsidy support and non-financial drivers like a first-mover advantage (Wood Mackenzie, 2019).
