Nowadays, the cost of energy storage systems per kilowatt hour is less than 0.2 yuan/kilowatt hour. Will the construction of energy storage on the power generation side also usher in a beautiful spring?

What is electricity cost?

The definition of electricity cost is the total amount spent on the energy storage system over its entire service life divided by the total amount of stored electricity. However, in order to obtain effective numbers, it is still difficult to consider the issues mentioned above, such as operation and maintenance, power loss, and fund discounting.

How to calculate the cost of electricity?
