What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

Does industry need energy storage standards?

As cited in the DOE OE ES Program Plan, "Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards ..." [1, p. 30].

What is energy storage R&D?

Under this strategic driver, a portion of DOE-funded energy storage research and development(R&D) is directed to actively work with industry to fill energy storage Codes &Standards (C&S) gaps. A key aspect of developing energy storage C&S is access to leading battery scientists and their R&D insights.

What is a typical energy storage deployment?

A typical energy storage deployment will consist of multiple project phases, including (1) planning (project initiation, development, and design activities), (2) procurement, (3) construction, (4) acceptance testing (i.e., commissioning), (5) operations and maintenance, and (6) decommissioning.

What are electrochemical energy storage deployments?

Summary of electrochemical energy storage deployments. Li-ion batteries are the dominant electrochemical grid energy storage technology. Characteristics such as high energy density, high power, high efficiency, and low self-discharge have made them attractive for many grid applications.

What are the three pillars of energy storage safety?

A framework is provided for evaluating issues in emerging electrochemical energy storage technologies. The report concludes with the identification of priorities for advancement of the three pillars of energy storage safety: 1) science-based safety validation,2) incident preparedness and response,3) codes and standards.
