#### What is a battery monitoring system (BMS)?

Voltage measurement: BMS includes specialized circuits to measure the voltage of individual battery cells or modules within the high-voltage battery pack. Accurate voltage monitoring is crucial for maintaining the health and safety of the battery system.

#### Why is voltage monitoring important?

Accurate voltage monitoring is crucial for maintaining the health and safety of the battery system. Current measurement: Current sensors are integrated into the high-voltage circuit to measure the charging and discharging currents of the battery pack.

#### What are the applications of a battery sensor?

Continuous integration of current and power ensures lossless tracking of charge and energy delivered or received by the battery pack. It is expected to find use in a variety of applications including; electric and hybrid vehicles, isolated current sensing, backup battery systems, high-power portable equipment, and so on.

#### How does a BMS measure a battery pack?

Generally,a BMS measures bidirectional battery pack current both in charging mode and discharging mode. A method called Coulomb countinguses these measured currents to calculate the SoC and SoH of the battery pack. The magnitude of currents during charging and discharging modes could be drastically different by one or two orders of magnitude.

#### What is SourceMeter SMU?

When a SourceMeter SMU instrument is programmed to source voltage in the remote sense (4-wire) configuration, internal sensing provides a feedback voltage that is measured and compared to the programmed level. The voltage source is adjusted until the feedback voltage equals the programmed voltage level.

#### How does a BMS measure bidirectional battery pack current?

Therefore, in discharging mode, current flows in the opposite direction from charging mode, out of the HV+terminal. Generally, a BMS measures bidirectional battery pack current both in charging mode and discharging mode. A method called Coulomb countinguses these measured currents to calculate the SoC and SoH of the battery pack.
