What is a net billing meter?

In net billing, an export meter measures the energy fed to the grid and usually sets the sale rate cheaper than the retail electricity tariff. Similarly, a separate meter measures energy imported from the grid, which is then added to the bill based on predetermined retail tariffs.

What is net energy metering (NEM)?

Net metering Net energy metering (NEM), or net metering, is the most common metering mechanism in networks with DG penetration. Under NEM, prosumers can send their excess electricity to the grid and gain credit in kilowatt-hours.
