

Are all-organic polymer dielectric films suitable for high-temperature applications?

This work provides a new idea for the design and synthesis of all-organic polymer dielectric films for high temperature applications. The development of polymer dielectrics with both high energy density and low energy loss is a formidable challenge in the area of high-temperature dielectric energy storage.

Can a parylene F film store electrical energy at a high temperature?

These benefits allow Parylene F films to effectively store electrical energy at temperature up to 150 °C, exhibiting a record discharged energy density of 2.92 J cm⁻³ at charge-discharge efficiency exceeding 90%. This work provides a new idea for the design and synthesis of all-organic polymer dielectric films for high temperature applications.

How does temperature affect the energy storage performance of PP-E films?

The energy storage performance of the films rapidly deteriorates as the temperature rises to 120 °C, as depicted in Fig. 5 b. The PP-E film retains the highest U_e of 3.08 J/cm³ at 650 kV/mm, representing a 97.4 % increase compared to pristine PP, which exhibits U_e of 1.56 J/cm³ at 550 kV/mm.

Can grafting a silane coupling agent improve dielectric and energy storage properties?

Three distinct group layers were successfully constructed on the surface of BOPP film, with grafting a silane coupling agent containing an epoxy group identified as the optimal choice for significantly improving both dielectric and energy storage properties.

Are polymer dielectrics suitable for high-temperature energy storage?

The development of polymer dielectrics with both high energy density and low energy loss is a formidable challenge in the area of high-temperature dielectric energy storage. To address this challenge, a class of polymers (Parylene F) are designed by alternating fluorinated aromatic rings and vinyl groups in the pol

What is the EAB of PVA/P (ILS-am) film?

In conclusion, the matching thickness of the films decreases with the increase of the P (ILs-AM) mole fraction, and the EAB is maintained at about 6 GHz. And the EAB of the PVA/P (ILs-AM) film is widest when AM:ILs=10:2 and P (ILs-AM) is 20 mol%, reaching 6 GHz at only 1.9 mm, which exhibits optimal EMA properties.

Due to high power density, fast charge/discharge speed, and high reliability, dielectric capacitors are widely used in pulsed power systems and power electronic systems. However, compared ...

In the preparation of multilayer energy storage dielectric using electrostatic spinning technology, there are often two methods: one is to electrospin multiple single-layer dielectric films separately, and then hot-press them into one ...

Preparation and improved energy storage capability of nanocomposites utilizing ultrathin 2D HfO₂@TiO₂ nanosheets. ... High-Temperature Polymer Dielectrics for New Energy Power Equipment. ...

The ever-increasing demand for the miniaturization of electric power systems and the construction of compact energy storage requires the realization of high-energy storage ...

Due to unique and excellent properties, carbon nanotubes (CNTs) are expected to become the next-generation critical engineering mechanical and energy storage materials, ...

For sustainable living and smart cities, the decarbonization of society is a central aim of energy research. Clean energy plays a key role in achieving global net-zero targets due ...

The schematic diagram of the preparation process of epoxy films is shown in Fig. S1. As for the E-828+DDM system, the DDM particles were melted by heating at 90 °C via oil ...

Moreover, preparation of various ion exchange membranes by radiation-induced grafting of polar monomers onto non-polar polymer films was reviewed previously [12]. The ...

This study presents a straightforward and scalable method to enhance the high-temperature dielectric and energy storage capabilities of biaxially oriented polypropylene ...

The energy density of the energy storage device is mainly determined by its capacitance and working voltage ($E = CV^2/2$); therefore, further improvement of its energy ...

PCF has great potential for space-constrained applications due to its thinness and excellent mechanical properties, as well as its convenience for transportation and portability. ...

Dielectric film capacitors with high energy density (W_{rec}) and high efficiency (η) as well as good flexibility are highly desired in electrical power systems, which will be beneficial to ...

Mikrouna's battery dry electrode film production equipment incorporate technologies such as powder spraying and binder fibrillation. These technologies are considered promising ...

Compared to other dielectric materials like polymers, oxide-based ferroelectric materials typically exhibit higher P_{max} and P_r due to their larger spontaneous polarization, ...

Upon rational architectural design, MXene-based films (MBFs) have aroused intense interest for broadening their applications in the energy storage and molecular/ionic ...

In 2014, a novel process for the direct formation of three-dimensional (3D) graphene structures via laser ablation of polyimide (PI) sheets was discovered [14]. The laser ...

Maintaining high charge/discharge efficiency while enhancing discharged energy density is crucial for energy storage dielectric films applied in electrostatic capacitors. Here, a ...

Polymer film capacitors are essential components in electrical and electronic equipment due to their high power density, ease of processing, high-voltage tolerance, and ...

Hence, the application of the prepared thermochromic membrane in thermal regulation, energy storage and wearable temperature sensor has great potential in the future, ...

Polymer synthesis and film preparation. HPMDA-BAPB and HBPDA-BAPB were synthesized via conditional one-step polycondensations. Taking HBPDA-BAPB as an ...

Capacitor energy storage devices are the focus of contemporary research, with film dielectric capacitors being the focus of mainstream research. Research on ...

Accordingly, the flexible, functional, and reliable electrochemical energy storage (EES) equipment is required to power emerging electronics. [4, 5] In particular, the global society is facing a ... Vacuum filtration is among the most widely ...

Abstract: Dielectric thin film, one of the materials of which storage energy in the form of electrostatic field via dielectric polarization, can be widely used in electric equipment, due to ...

Metallized polymer films as current collectors represent interesting opportunities to increase both gravimetric and volumetric energy density while improving battery safety aspects and saving scarce resources compared to ...

This perspective article describes the application opportunities of carbon nanotube (CNT) films for the energy sector. Up to date progress in this regard is illustrated with representative examples of a wide range of energy ...

Polymer-based film capacitors are increasingly demanded for energy storage applications in advanced electric and electronic systems. However, the inherent trade-offs ...

Rapid advancements in areas like new energy generation systems, energy conversion equipment, and electric vehicles have necessitated capacitor films with high c

The transparent flexible PVA/P (ILs-AM) film was obtained. 552 Preparation of PVA/P (ILs-AM)/SSD film

553 The prepared PVA/P (ILs-AM) precursor solution with P (ILs ...

Different from directly loading the thermochromic system on MEPCMs as mentioned above, Zhao et al. [149] combined MEPCMs with a multi-field driven thermochromic film to ...

The requirement for energy storage application has been greatly stimulated by the development of smart grids, aerospace, and hybrid vehicles. The high-temperature film ...

Capacitors as electromagnetic equipment, new energy generation and other areas of the core devices, generally divided into ceramic capacitors and polymer capacitors, ...

Moreover, the preparation and cross-scale application paradigms of CNT films also offer a good model for other macroscopic ordered assemblies of one-dimensional ...
