

The fuzzy control logic proposed can perform the aforementioned activity while the state of charge of the energy storage system is maintained within operational limits. In order to assess the fuzzy logic power control's ...

Equilibrium methods can be divided into passive and active [7], [8]. Passive equalization dissipates the excess energy of a high energy battery in the form of heat, mainly ...

This paper presents methods of controlling a hybrid energy storage system (HESS) operating in a microgrid with renewable energy sources and uncontrollable loads

Battery Energy Storage System Control for Mitigating PV Penetration Impact on Primary Frequency Control and State-of-Charge Recovery. IEEE Trans Sustain ... Xu Y, Wang ...

Energy storage systems based on virtual synchronous control provide virtual inertia to the power system to stabilize the frequency of the grid while smoothing out system power ...

Peer-review under responsibility of the scientific committee of the 8th International Conference on Applied Energy. doi: 10.1016/j.egypro.2017.03.983 Energy Procedia 105 (...

The objectives of the research are: To control the charging and discharging processes of a battery energy storage system (BESS) using battery voltage and current ...

Currently, the DFIG primary frequency control method based on the traditional energy storage is more widely studied and efficient. However, the potential overcharge and discharge of the ...

In order to take full advantage of the complementary nature of multi-type energy storage and maximally increase the capability of tracking the scheduled wind power output, a ...

A traditional fuzzy control energy management strategy is realized directly. In addition, the minimum energy loss of HESS is then regarded as the objective function, which ...

Application of Fuzzy Control for the Energy Storage System in Improving Wind Power Prediction Accuracy. American Journal of Energy Research, 1(3), 54-58. Mu-ti, A Li-nu-er A, CHAO Qin, TU Er-xun Yi Bu-la-yin, ...

Improving direct current microgrid (DC-MG) performance is achieved through the implementation in conjunction with a hybrid energy storage system (HESS). The microgrid's ...

Research results demonstrate that compared to traditional fuzzy control strategies, the optimized fuzzy control strategy stabilizes the SOC fluctuation range and reduces energy losses.

In order to maintain the charging and discharging capacity of the power-type storage, it conducts corresponding optimization control of the output through a fuzzy control ...

The penetration of renewable energy resources (RERs) in modern power systems has a significant impact on system frequency. Battery energy storage systems (BESSs) can ...

An active topology utilising two direct current/direct current (DC/DC) converters and a switch was used to implement the hybrid energy storage system. Fuzzy logic was used as a close-loop control structure to ...

At present, many scholars have carried out relevant studies on the feasibility of energy storage participating in the frequency regulation of power grid. Y. W. Huang et al. [10] ...

Considering their coupling relationship, a rule-based fuzzy logic controller (FLC) is proposed in this paper for battery energy storage systems (BESSs) to coordinately provide ...

To achieve optimal power distribution of hybrid energy storage system composed of batteries and supercapacitors in electric vehicles, an adaptive wavelet transform-fuzzy logic ...

To address the instability of wind power caused by the randomness and intermittency of wind generation, as well as the challenges in power compensation by hybrid ...

A fuzzy control strategy for energy storage systems has been proposed to address the frequency fluctuation [29]. A fuzzy droop control loops adjustment have been proposed to ...

This EMS uses i) fuzzy logic control to guarantee the state of charge of the energy storage system (ESS) at the desired range, ii) model predictive control (MPC) to define the ...

This paper presents methods of controlling a hybrid energy storage system (HESS) operating in a microgrid with renewable energy sources and uncontrollable loads. The HESS contains at ...

The hybrid energy storage system (HESS), which combines a battery and an ultra-capacitor (UC), is widely used in electric vehicles. In the HESS, the UC assists the battery in ...

Nonetheless, progress in energy storage technologies, power interface advancement, smart grid infrastructure, and advanced energy control strategies offer ...

An optimal model-free control (MFC) strategy with distributed energy storage systems (DESS) is proposed to

optimize frequency dynamic response and enhance stability of ...

Authors in Ref. [31] simulated and implemented a master-slave control for DC-MG supplied by PV-FC-Li-ion and superconducting magnetic energy storage (SMES). The master ...

Battery energy storage systems (BESSs) can play a key role to regulate the frequency and improve the system stability considering the low inertia nature of inverter-based ...

Global Energy Interconnection Vol. 7 No. 1 Feb. 2024 76 4 Power Secondary Allocation Strategy Based on Rule-Based Multi-Fuzzy Control Within the hybrid energy ...

Distributed renewable sources are one of the most promising contributors for DC microgrids to reduce carbon emission and fuel consumption. Although the battery energy storage system (BESS) is widely applied to ...

As renewable energy penetration increases, maintaining grid frequency stability becomes more challenging due to reduced system inertia. This paper proposes an analytical ...

An energy management strategy (EMS) is highly required to optimize load sharing among SC, FC, and battery. For electric vehicle applications, optimizing hydrogen ...
