

Can a battery/ultracapacitor hybrid energy storage system be used for electric vehicles?

Abstract: In this paper, a new battery/ultracapacitor hybrid energy storage system (HESS) is proposed for electric drive vehicles including electric, hybrid electric, and plug-in hybrid electric vehicles.

What is a hybrid electrochemical energy storage system?

Hybrid electrochemical energy storage systems (HEESSs) composed of lithium-ion batteries and supercapacitors can play a significant role on the frontier. However, the development of an efficient HEESS for specified applications involves with multi-faceted aspects.

Can electrified vehicles be used as energy storage systems?

Increasing electrified vehicle penetration would not only help reduce pollutant emissions and dependency on fossil fuels, but also facilitate the synergistic development of renewable energy through vehicle-to-grid (V2G) integration where PHEVs and BEVs can be used as flexible electrical storage systems [19,20].

Is there an enabling HEESS for a smart grid or electrified vehicle?

Energy and power density of canonical electrochemical EESSs (adapted from Ref.). The development of an enabling HEESS for either smart grid or electrified vehicle application is nontrivial.

Which energy management methods are used in vehicular and smart grid applications?

HEESS energy management methods in vehicular and smart grid applications [.,] can be generalized into two categories, i.e., rule- and model-based approaches.
