Energy storage is not only a safe way to charge energy outdoors

Could a battery energy storage system democratize access to electricity?

Moreover, battery energy storage systems (BESS) could help democratize access to electricity. "In remote areas, such as in the mountains or in poorer countries, coupling renewable power with storage is a must for bringing energy to more people," Knauth says. Yet energy storage systems have their hurdles.

Why do we need electrical energy storage systems?

In a world in full development of technologies related to renewable energies, progress in electrical energy storage systems plays a fundamental role. This development accompanies the promotion of sustainable energy sources and makes it possible to optimize the use of each megawatt generated, contributing to the balance of grid systems.

Are energy storage systems safe?

Yet energy storage systems have their hurdles. "They do not last long enough. Some materials, like cobalt, are toxic; others are scarce. Most must be mined, which adds to carbon emissions," he says. Today, lithium batteries are the most common. Their key strength is their high energy density, both by weight and by volume.

How can a battery energy storage system maximise the use of solar energy?

To maximise the use of the solar energy that is available some hours of the day, the electricity production from the panels must exceed the needs in that period, so that excess can be stored and utilised later, until the sun shines again. This is possible with battery energy storage systems (BESS).

Is energy storage a good idea for small businesses?

On a smaller scale, energy storage is unlocking new economic opportunities for small businesses. By integrating renewable power with agriculture, individuals can store and supply excess energy, enhancing national grid resilience and diversity while generating profit. China has been a global leader in renewable energy for a decade.

Do we need energy storage solutions?

"We need energy storage solutions to make them permanent," says researcher and electric battery expert Philippe Knauth in an interview for bbva.com. He also points out that the democratization of energy depends on "the combination of renewable energies and energy storage."
