

What are the requirements for a reg system inspection?

Completeness of the documentation and its correspondence with the REG system on-site, as per SEC's inspection checklist. Inspect the presence of Interface Protection and required switches. Witness Compliance test to be performed if necessary, during cold commissioning. Temporary connection granted (known as "Limited Operational Notification").

What is the energy storage safety strategic plan?

Under the Energy Storage Safety Strategic Plan, developed with the support of the U.S. Department of Energy (DOE) Office of Electricity Delivery and Energy Reliability Energy Storage Program by Pacific Northwest Laboratory and Sandia National Laboratories, an Energy Storage Safety initiative has been underway since July 2015.

Can CSRS be applied to energy storage systems?

Until existing model codes and standards are updated or new ones are developed and then adopted, one seeking to deploy energy storage technologies or needing to verify the safety of an installation may be challenged in trying to apply currently implemented CSRs to an energy storage system (ESS).
