

How does Fike protect lithium ion batteries and energy storage systems?

Learn how Fike protects lithium ion batteries and energy storage systems from devastating fires through the use of gas detection, water mist and chemical agents.

Can a battery energy storage system control electrical fires?

However, these systems may be used in the computer or control rooms of an ESS to control any electrical fires. Thermal runaway in lithium batteries results in an uncontrollable rise in temperature and propagation of extreme fire hazards within a battery energy storage system (BESS).

What happened at an energy storage system in Surprise AZ?

In 2019, a fire and explosion at an energy storage system in Surprise, AZ, near Phoenix, was triggered by an overheated lithium-ion battery injuring several first responders and resulting in significant damage to the facility and disruption to the surrounding community.

Can a pre-installed battery system detect a fire?

They are only sensitive enough to detect smoke after a fire has started, which is much too late to stop thermal runaway from igniting an entire bank of batteries. Furthermore, these pre-installed systems cannot be serviced, monitored, or maintained to ensure they are in basic working order due to unit design.

What is a battery energy storage system?

As the world transitions to renewable energy, Battery Energy Storage Systems (BESSs) are helping meet the growing demand for reliable, yet decentralized power on a grid scale. These systems gather surplus energy from solar and wind sources, storing it in batteries for later discharge.

What is a very early warning smoke detection system?

Very Early Warning Smoke Detection systems use ultra-sensitive sensors to provide early warning of an impending fire event, buying time to initiate an appropriate emergency response to prevent injury, property damage or business disruption.
