Hot pressing is a green method without the usage of toxic solvents. For polymer based composite cathodes, hot pressing usually involves the mixing of materials by ball milling or chopper, hot press and/or high-temperature extrusion (Fig. 21 a and b), followed by the roll-milling calendaring [96, 129, 180, 181]. At the temperature over melting point (>60 °C for PEO), linear polymers ...
