

What do whole-home battery backup systems power?

Whole-home battery backup systems can power your entire home in the event of an outage. The difference between whole-home and partial-home battery backup systems is pretty self-explanatory: Whole-home systems just have more batteries.

How many kWh does a battery backup system store?

Whole-home battery backup systems typically store around 10 to 15 kWh of energy. While partial-home systems usually store less, they may be sufficient for areas with infrequent power outages. However, if your utility's power supply is unreliable, a whole-home battery backup system might be the better choice.

Why do solar panels need a battery backup system?

Pairing your solar panels with a battery backup system provides you with renewable resilience. This means that you can store excess energy produced by your solar panels and use it during power outages, effectively boosting your home's resiliency.

What can a home energy storage system power during an outage?

Most home energy storage systems provide partial backup power during outages. These smaller systems support critical loads, like the refrigerator, internet, and some lights. With independence from the utility grid, you can avoid the inconvenience of outages without sacrificing your daily routines.

What does a whole-home energy storage system allow you to do?

Whole-home setups allow you to maintain normal energy consumption levels during power outages. Most home energy storage systems provide partial backup power during outages, supporting critical loads like the refrigerator, internet, and some lights.

Why choose a home energy storage system?

A home energy storage system offers independence from the utility grid, allowing you to avoid power outages without disrupting your daily routines. Most systems provide partial backup power, supporting critical loads such as the refrigerator, internet, and some lights.
