

What is HK Electric's mobile battery energy storage system?

On September 6, 2023, the ceremony of the mobile electricity supply system at HK Electric's Cyberport Switching was successfully held, which marked that the SCU 250KW/576KWh vehicle-mounted mobile battery energy storage system was officially put into operation at HK Electric's Cyberport Switching Station. The system is a technology that combines...

How much power does an energy storage vehicle have?

The system includes a lithium battery energy storage system, energy storage converter, air conditioner, fire protection, and vehicle-mounted box. The energy storage vehicle has a configuration capacity of 576kWh and an output power of 250KW, which can meet the power supply requirement of a 250kW load for 2 hours.

What are SCU mobile energy storage power supply vehicles?

The SCU mobile energy storage power supply vehicles mainly consist of an energy storage truck (EST) and a power changeover truck (PCT), which can provide temporary relief when the normal power supply is unavailable. Emergency power supply When the EST is about to run out of power, the PCT will switch power to another fully charged EST.

Why is SCU launching a green mobile battery energy storage system?

Especially during power outages, mobile generators used to be used to provide emergency power supply to affected customers, which caused problems such as long start-up time and high noise pollution. In this regard, SCU has launched a green mobile battery energy storage system.

How can vehicle-mounted energy storage be positioned within microgrids?

A bi-level framework is developed for positioning vehicle-mounted energy storage within the microgrids. The first level maximizes investments in mobile storages, and the second level drives the installed transportable storages. The model creates dynamic microgrids and prevent the anticipated load shedding by catastrophes.

Are batteries a reliable backup resource?

Batteries are an example of electrical energy storages that has been field-validated as a reliable backup resource that improves the resilience of especially against the floods. However, employing these devices for resilience improvement is inadequate to legitimize their installation economically.
