In this work, a new modular methodology for battery pack modeling is introduced. This energy storage system (ESS) model was dubbed hanalike after the Hawaiian word for "all together" because it is unifying various models proposed and validated in recent years. It comprises an ECM that can handle cell-to-cell variations [34, 45, 46], a model that can link ...

These microgrids are connected to C-EMS, which supervises energy storage using a shared battery energy storage (SBES) system, enhancing the reliability and flexibility of individual microgrids. Each microgrid consists of its battery energy storage (BES), renewable energy generation (such as photovoltaic systems), and conventional fossil fuel ...

We propose to characterize a ""business model"" for storage by three parameters: the application of a storage facility, the market role of a potential investor, and the revenue stream obtained from its operation (Massa et al., 2017). An application represents the activity that an energy storage facility would perform
