A system designer will also determine the required cable sizes, isolation (switching) and protection requirements. Notes: 1. The new standard AS/NZS5139 introduces the terms "battery system" and "Battery Energy Storage System (BESS)". Traditionally the term "batteries" describe energy storage devices that produce dc power/energy.

However, in recent years some of the energy storage devices available on the market include other integral components which are required for the energy storage device to operate. The term battery system replaces the term battery to allow for the fact that the battery system could include The energy storage plus other associated components.
